

WF-REPCO™

TUBE SUPPORTS AND HANGERS

As the recognized brand leader, the WF-Repco™ line is dependable, can stand up to harsh environments, and withstands high stress levels. Waukesha Foundry has the ability to cast tube supports, hangers and brackets in any configuration to accommodate retrofits or new construction.

WF-Repco™ Advantages

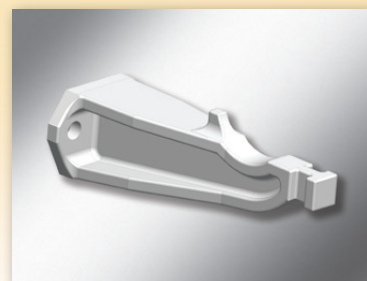

- ▶ Castings customized to refinery and petrochemical applications
- ▶ Wide selection of stainless and heat-resistant stainless steel alloys
- ▶ Alloys can be formulated to meet exact specifications
- ▶ Patterns are built on-site
- ▶ Molds are produced utilizing the latest mixing technology for chemically set sands
- ▶ Ability to cast single-piece hangers or multiple-piece hanger assemblies in numerous shapes and sizes to accommodate multiple hook needs
- ▶ Castings meet or exceed all customer quality requirements

Patternless Molding Process

Waukesha Foundry can expedite the production of cast components economically with our Patternless Molding Process, a necessity when an existing pattern isn't available. Our state-of-the-art robotic cells will convert your CAD data into machine paths and machine the geometries directly into sand mold blanks. This new technology eliminates the need for conventional pattern equipment and significantly reduces costs and lead times. It is ideal for both high-volume production runs and low-volume runs that require only one or two parts at a time.
