

WAUKESHA FOUNDRY

A United Stars Company

QES POLICY

(QUALITY, ENVIRONMENTAL AND SAFETY)

The Waukesha Foundry objective is to assure that each of our products is manufactured to meet or exceed all contract requirements, without injury or detrimental impact to the environment.

To achieve this objective, we will implement a documented Quality and Production system, which complies to ISO9001- 2008. In addition, we will ensure safety and environmental regulations are met, and that the company drives to best practice through documented Environmental and Safety programs.

This basic Waukesha policy embraces the belief that fulfillment of quality, environmental, and safety goals is a total company effort. Each department is responsible for seeing that the work it performs is safe and environmentally responsible. As it affects the end product, it must fulfill the overall company objectives of customer satisfaction with full conformance to customer requirements.

It is a condition of employment to know and follow authorized, written procedures at all times. We ask that each employee become an active participant in continually improving the safety, environmental, and quality programs at Waukesha Foundry.

The measures incorporated in these programs are fully supported by the Management and Staff of Waukesha Foundry, who recognize the fundamental premise that providing a quality product safely without detrimental impact to the environment, is the most important element to business success, and that continual improvement is vital to growth and prosperity.
